

**CA20BK**  
**REFILL INSTRUCTIONS**  
**For Canon® BC-20**

**Contents:**

Your kit should contain the following:

1 - 4oz bottle of ink, 1 10cc syringe, 1 blunt needle, 1 polly wipe, 1 drill tool, instructions.

If any of these items are missing please call us for a replacement item or kit.

**PLEASE WORK ON NEWSPAPER IN CASE OF SPILLAGE**

1) Please avoid touching the printhead, you may damage it. It is very fragile.

2) Locate the vent hole (plug) on the cartridge and using the drill tool, drill completely through the smaller outer hole. Remove the plug by SLIGHTLY bending the drill tool while pulling out. (Figure 1)

**Figure 1**

3) Using the syringe (attach the needle first) draw 10cc of ink from the bottle. Insert the needle as far as it will go into the vent hole. Slowly inject the ink while pulling the needle back out. Do this three times or 30cc of ink.

**Figure 2**

4) Re-insert the plug, which you removed in step 2. Put the cartridge back in the printer and run the print head cleaning routine. (Figure 2)
