1 - 2oz bottle of ink, 1 10cc ink injector, 1 polly wipe, 8 yellow seals, needle, instructions.
If any of these items are missing please call us for a replacement item or kit.

EPSON STYLUS 800/1000

DRILL HERE

STEP 1

Drill a hole at the location shown above. Attach the needle to the syringe and draw 12 to 15 cc of ink into syringe. Seal the ink exit hole with the yellow dot seal to avoid leakage. Place the cartridge to be filled on a paper towel in case of ink spillage.

STEP 2

Insert the needle into the hole you drilled and slowly inject the ink and at the same time lift up slightly to expose the ink to different parts of sponge inside. The cartridge may or may not take all of the ink, depending on how empty it is at this time. Cover the drill hole with tape. Remove the yellow dot seal from the exit ink hole before installing your cartridge into your printer.

SPECIAL NOTES

As a reservoir cartridge the S020025 should be refilled using premium ink since the print head is internal and made to be permanent, which makes it susceptible to small particles clogging it over time. This cartridge measures 1"X 2"X 1-1/2" and has an internal sponge for ink retention.

TROUBLE SHOOTING

PRINTS IN STREAKS / MISSING LINES

Perform print head cleaning procedure as described in your printer owners manual.

CARTRIDGE LEAKS

The cartridge is over filled. Place on a paper towel until it stops leaking.
